

How to import a STEP file into SketchUp using the SimLab plugin

1. Download and Install the SimLab STEP Importer Plugin for SketchUp:

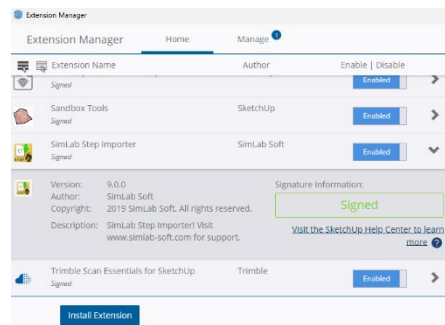

- Visit the SimLab Soft website or the SketchUp Extension Warehouse.
- Download and install the plugin following the instructions on the website.

Download link: https://www.simlab-soft.com/3d-plugins/STEP_Importer_For_Sketchup-main.aspx

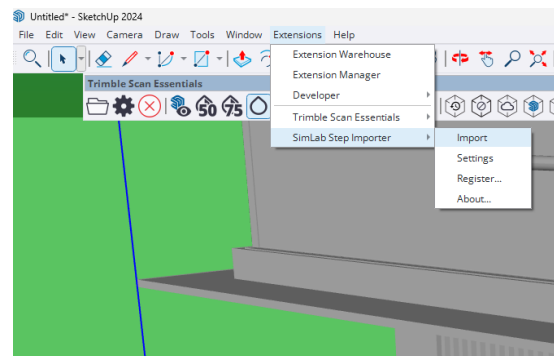

2. Prepare SketchUp for Importing STEP Files:

- Open SketchUp.
- Ensure the SimLab STEP Importer plugin is installed correctly by checking the "Extensions" menu.

3. Importing a STEP File into SketchUp:

- Go to the "Extensions" menu in SketchUp.
- Select "SimLab STEP Importer".
- Click on "Import STEP".
- Navigate to the location of your STEP file and select it.
- Click "Open" to start the import process.

4. Adjusting Imported Geometry:

- Once the STEP file is imported, you may need to adjust the model within SketchUp.
- Use SketchUp's native tools to manipulate, scale, or modify the imported geometry as needed.

5. Saving the Imported File as a SketchUp File:

- After making necessary adjustments, save the file in SketchUp format (.SKP).
- Go to "File" -> "Save As" and choose the location and name for your SketchUp file.
