ARCHITECTURAL FIREPLACES

MADE IN BELGIUM

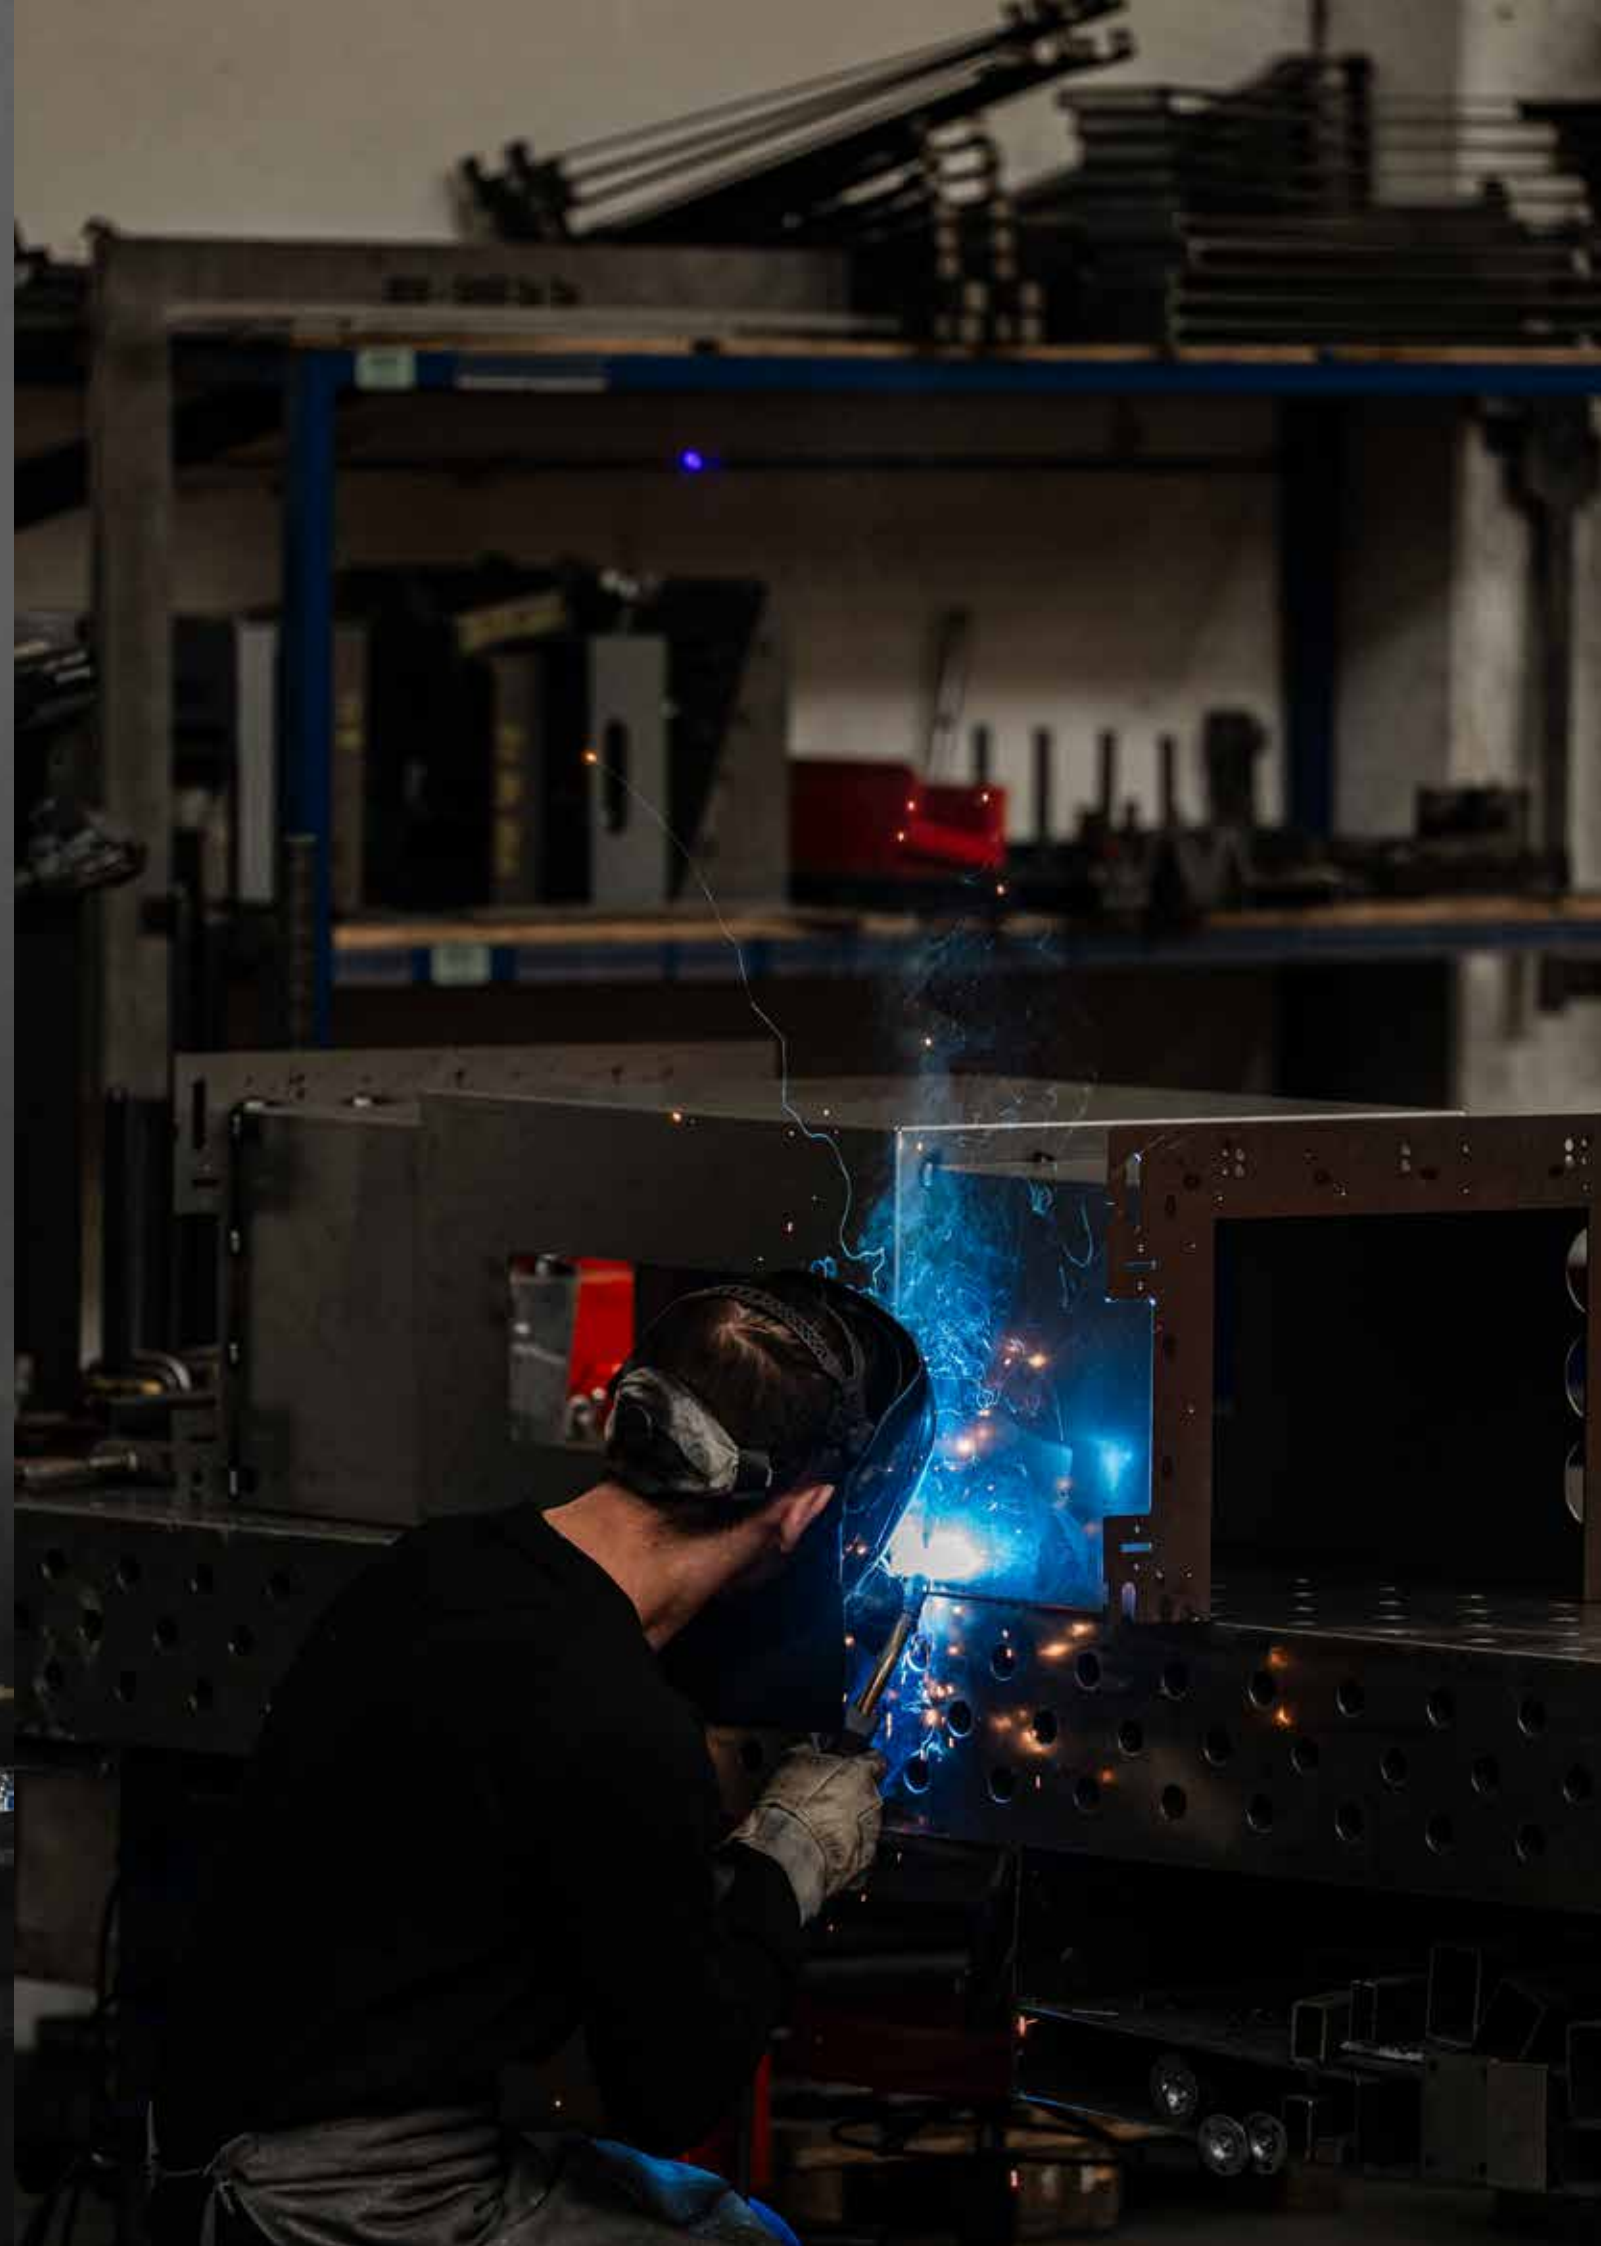

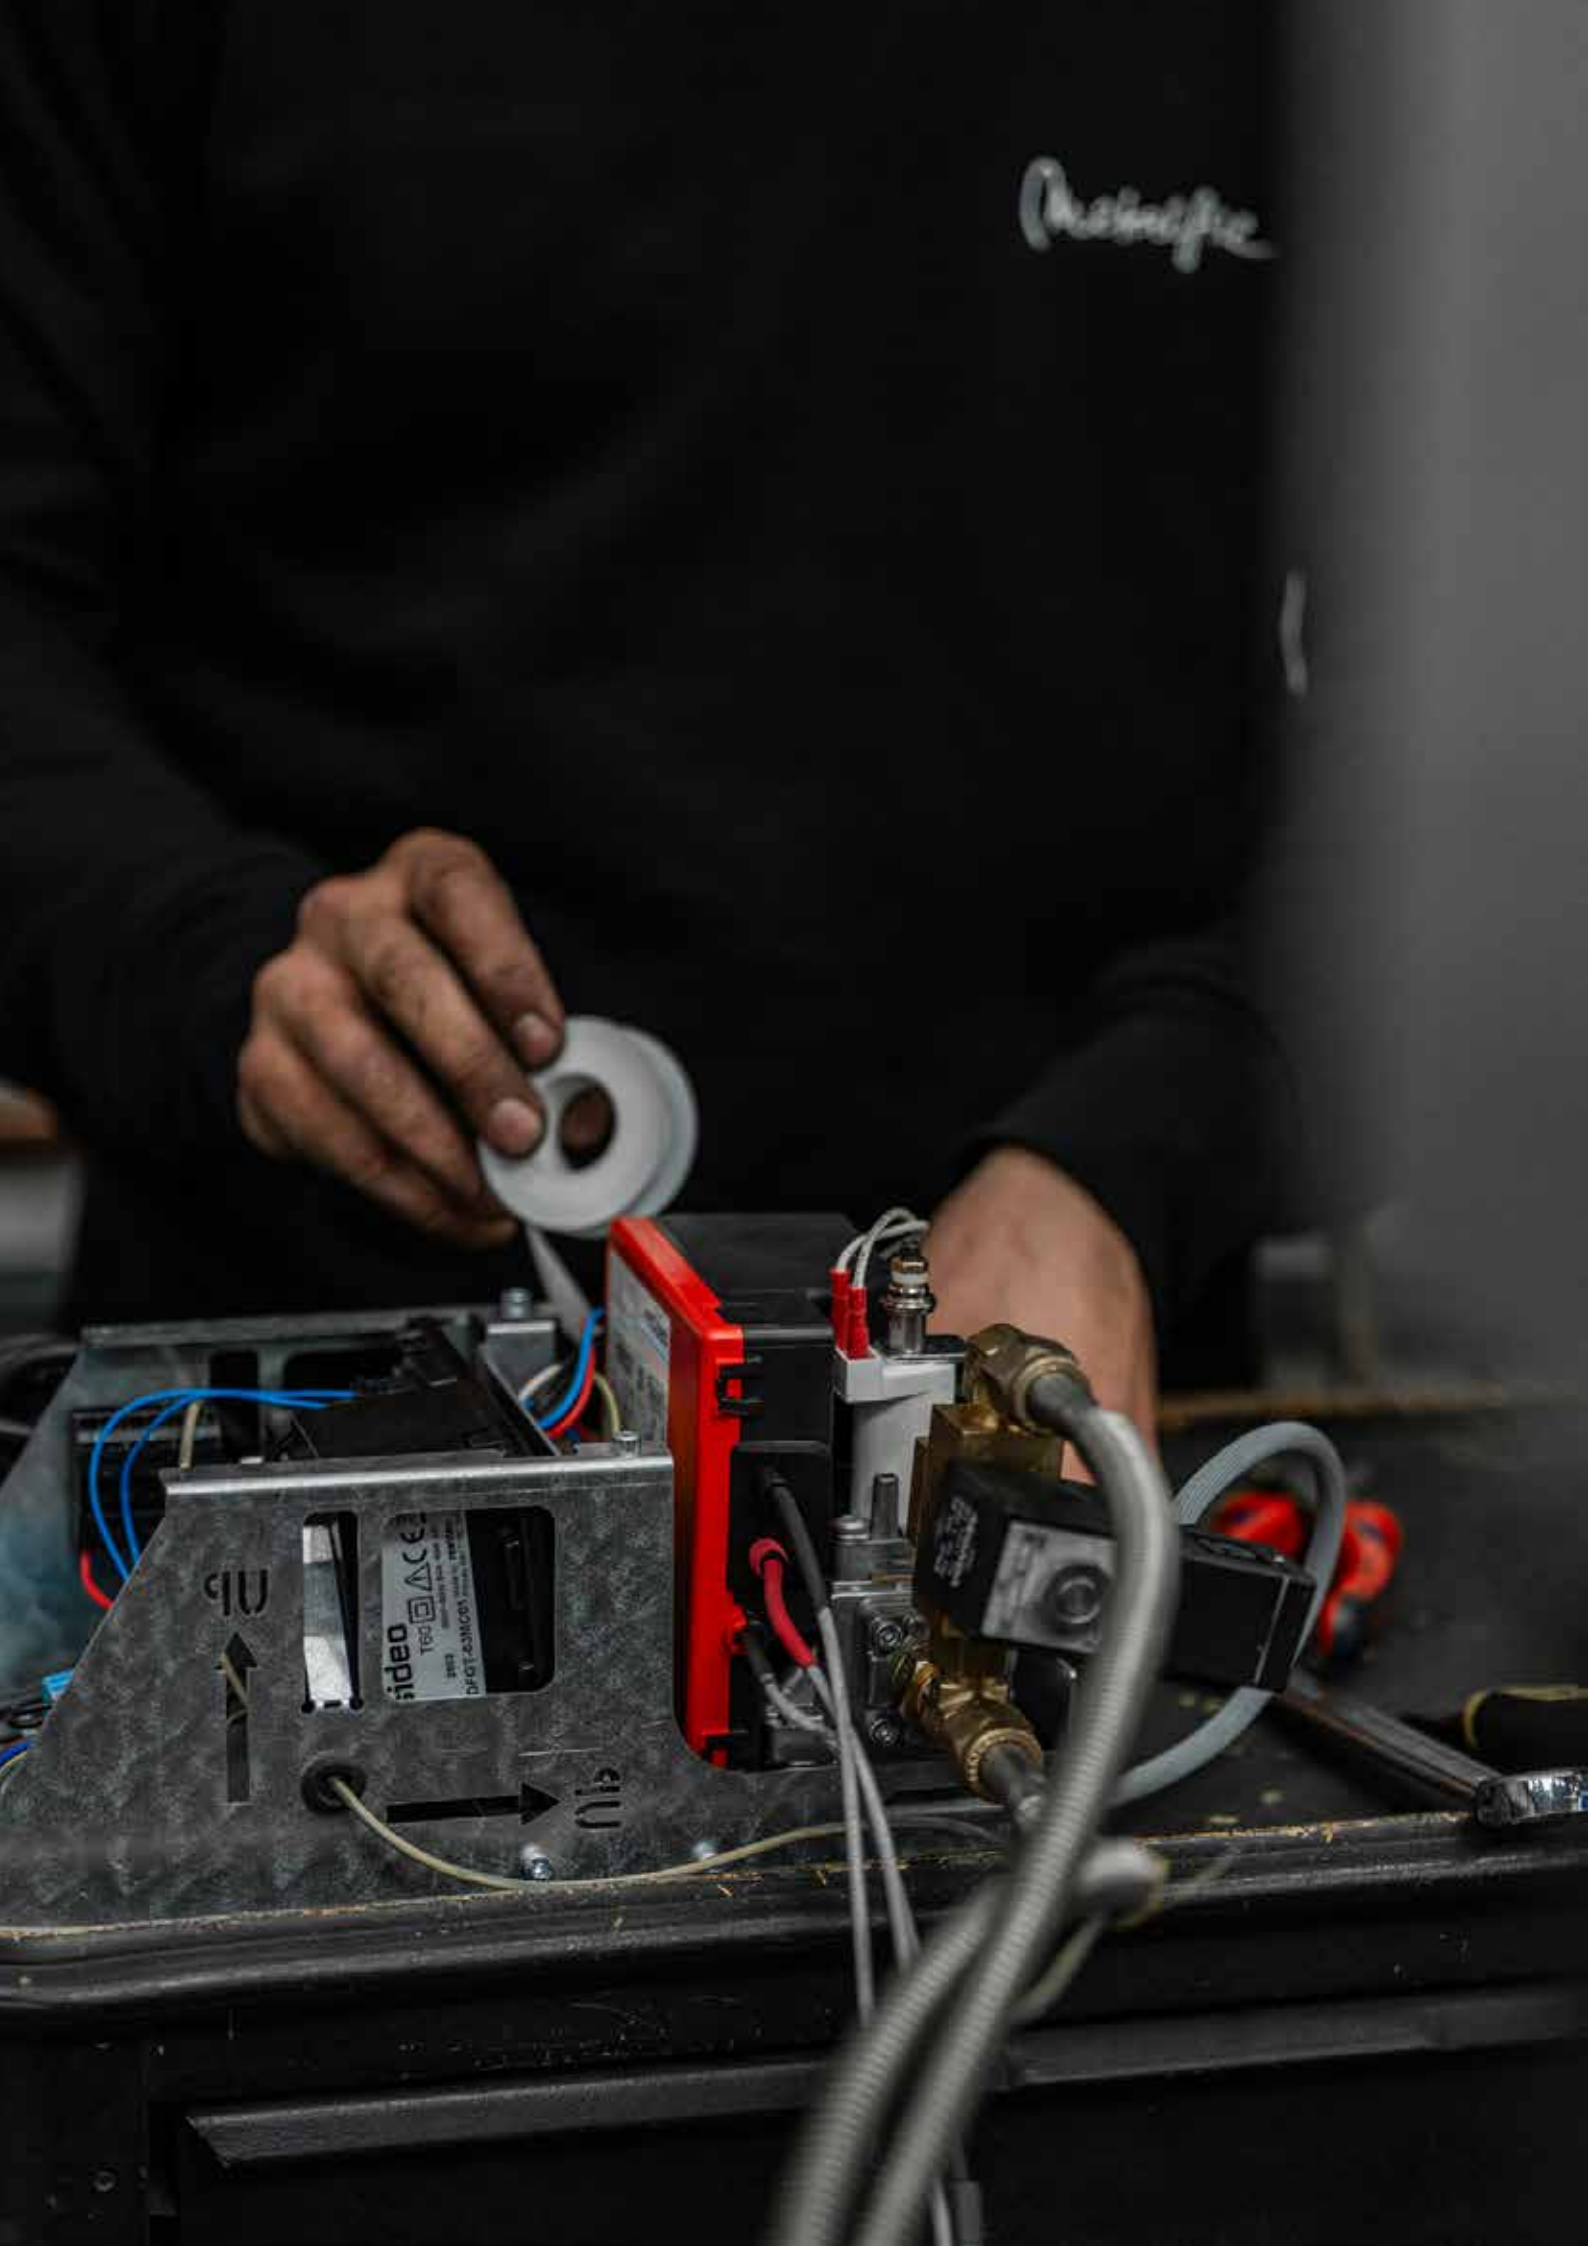

Metalfire

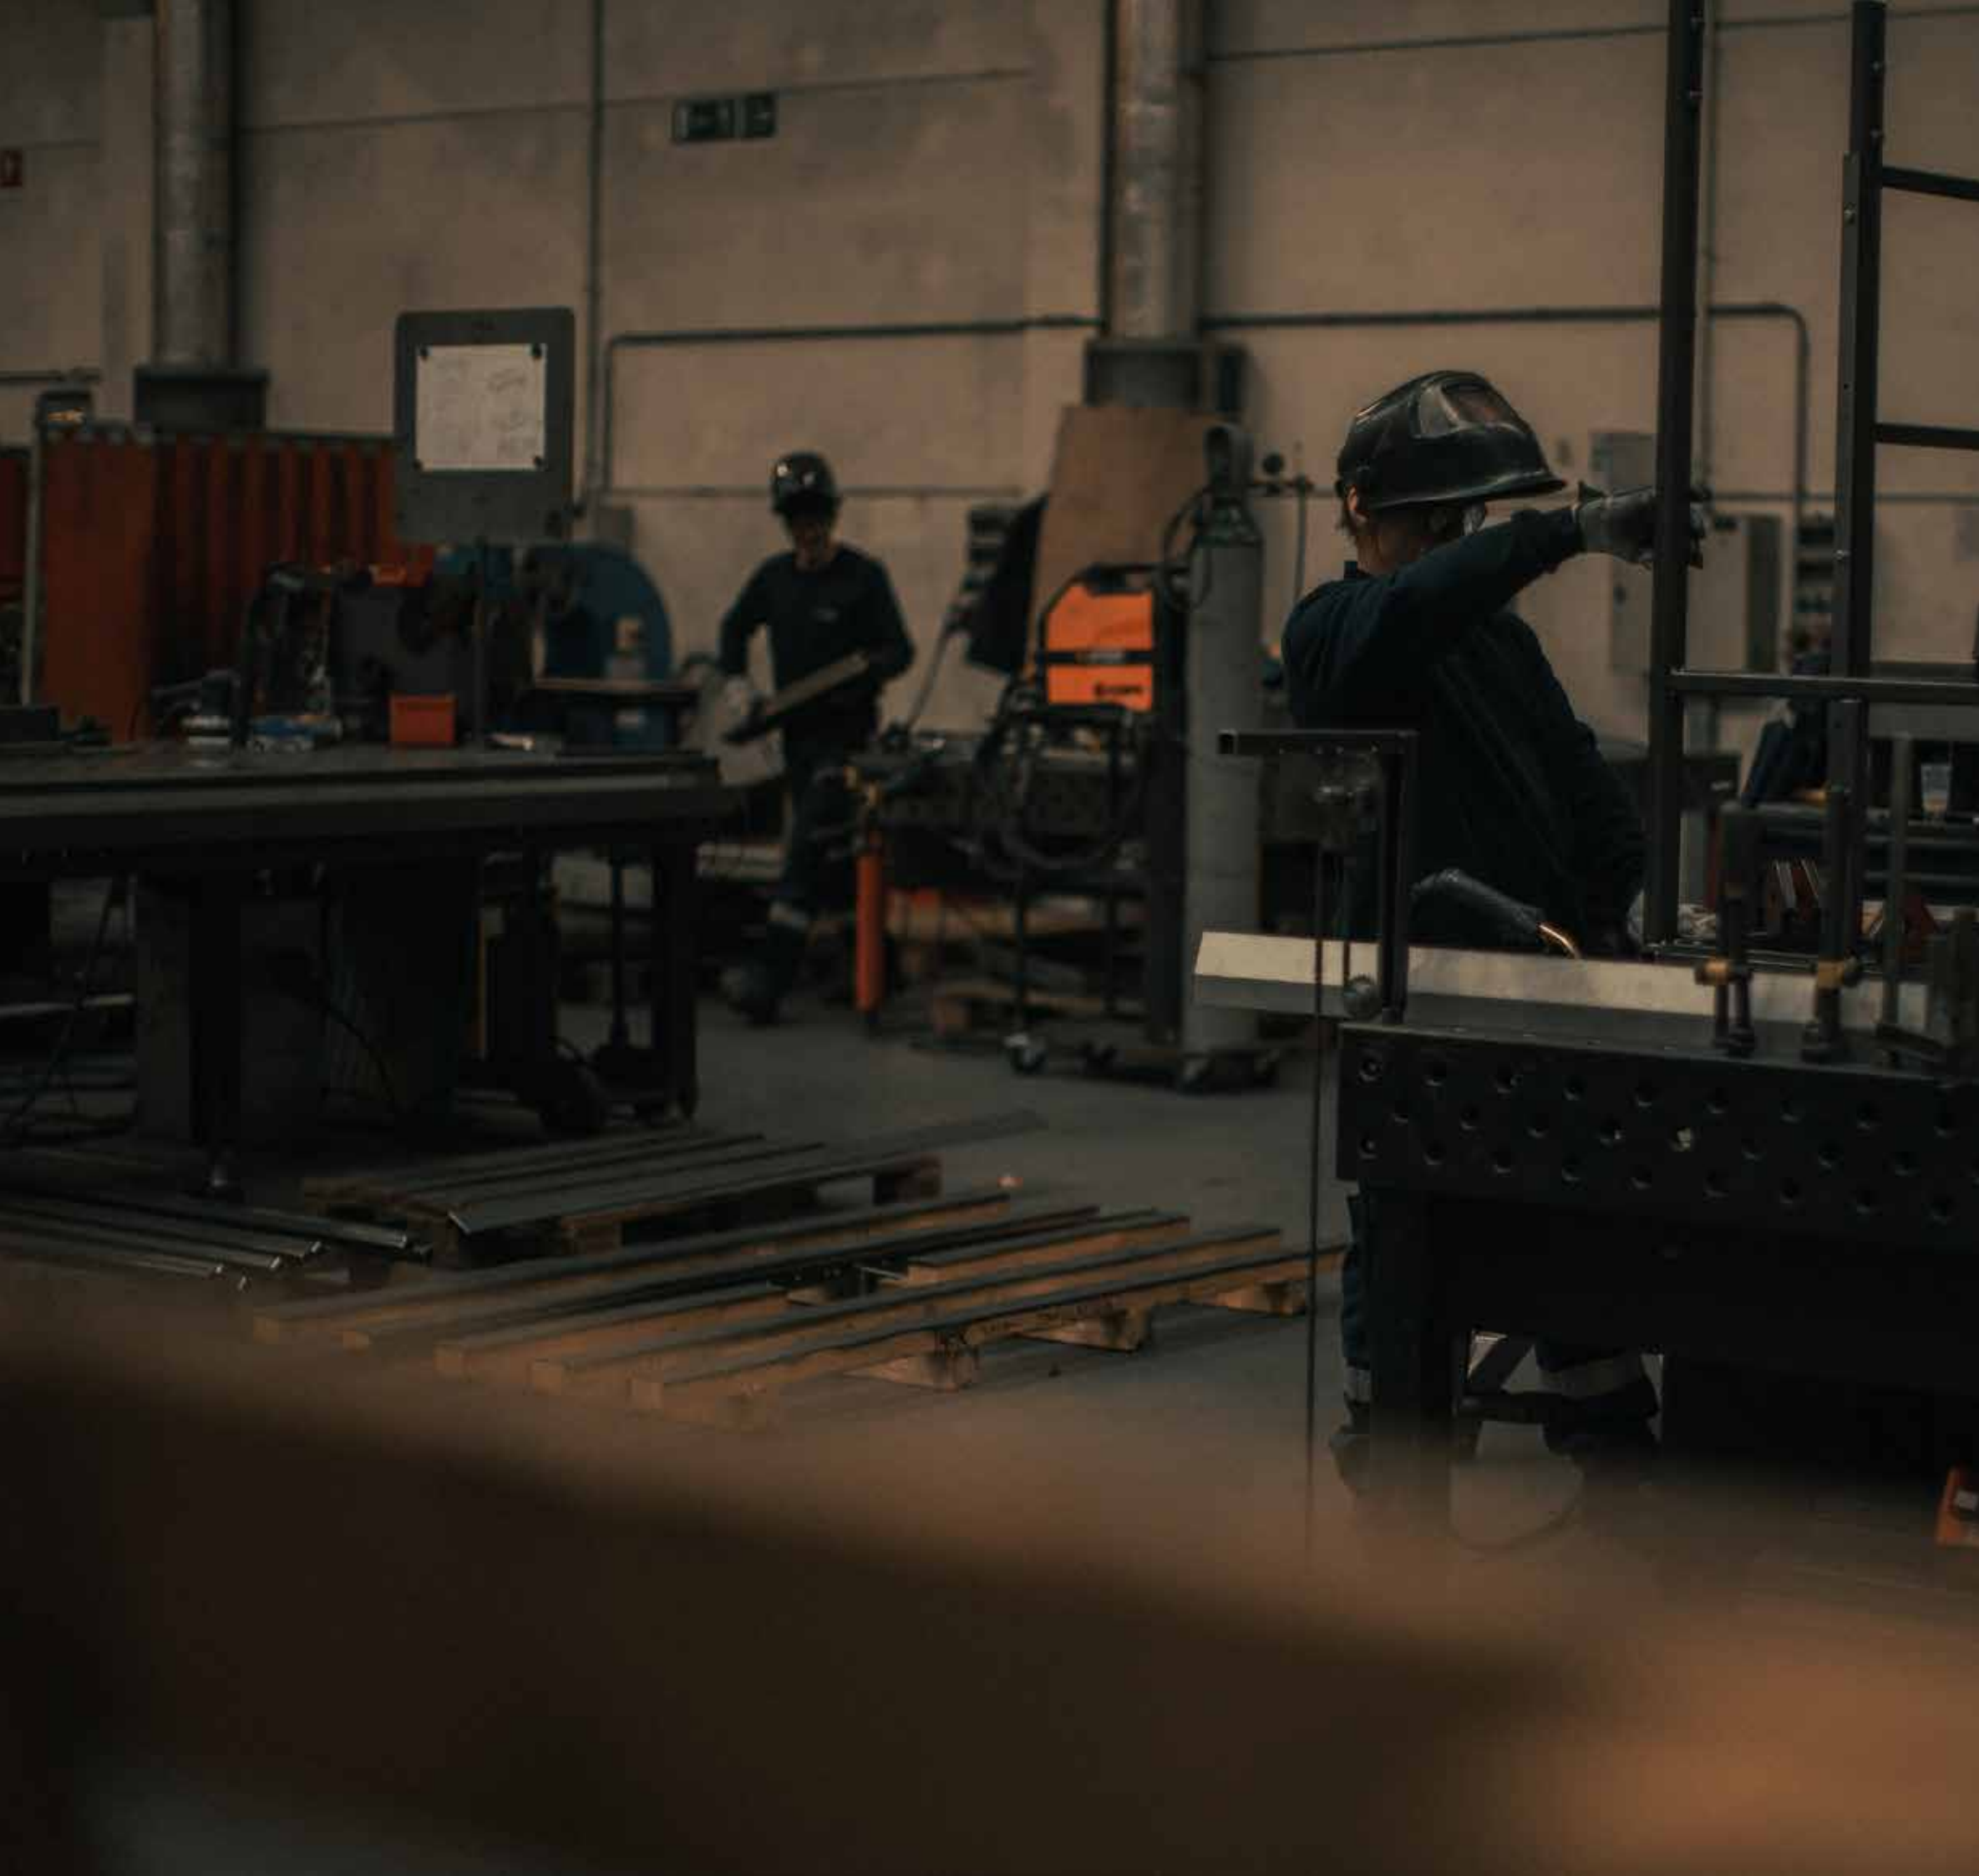

INTRO

Metalfire

ABOUT Belgian roots and no-nonsense entrepreneurship, that is Metalfire. With an eternally burning passion for beauty, they have been designing and build innovative high-end gas and wood-burning fireplaces in metal. Each one handmade and characterized by an air of grandeur. They are innovative, dedicated and tasted all over the world.

Unlike other brands, the Metalfire fireplace is designed from an aesthetic desire, a pursuit of beauty and a preference for unity and tranquillity.

Each fireplace complies with European standards. It is therefore a safe designer product that is also customizable and blends seamlessly with any interior. Metalfire collaborates with several renowned architects and industry professionals, and since its acquisition by Bremhove in 2017, production is done entirely in its own workshop in Belgium. A continuous, warm collaboration between the R&D team, draftsmen and welders. In addition to the unique fireplace collections, Metalfire brings a full accessories line and outdoor fire pits. The Anemone designer fire basket and handy accessories such as the fire poker get the same high-level finish and provide for unity in the architecture of the home.

MISSION Metalfire has a clear mission: spread a fiery heat. Thanks to their design, craftsmanship and passion, the creations radiate a primal charm and home-feeling. With a professional management team and a growing number of international distributors, they want to bring people together worldwide and provide fire for conversations, well into the future.

With a strong long-term vision, they offer exclusive partnerships, innovation and the well-being of their people every opportunity. In short, Metalfire goes beyond and even further.

USP

Metalfire

100% BELGIAN CRAFTSMANSHIP

Belgian craftsmanship is Metalfire's credo. Every day, the vision of extraordinarily unique fireplaces is put into practice by the expert hands of skilled craftsmen. It creates a unique appeal that by automated production processes simply cannot be imitated.

MADE TO MEASURE

Their no limits attitude allows ample possibilities in customization, finishing frames and extensions. Each fireplace can be adapted to the customer's personal requirements. Customization supports the creative vision of the architect or interior designer, all within the imposed standards. You want it, they create it. Metalfire's motivation to blend into the architecture and the interior of the home as a whole, is what sets them apart from the masses.

FLEXIBILITY

The fireplace manufacturer consists of a relatively small number of employees, which makes them perfectly attuned to each other and able to move quickly. Without the passionate men and women in the design offices and production workshops, Metalfire would not be what it is today. It is a close-knit team consisting of the right people with a great passion for their craft.

USP

Metalfire

INSPIRING INNOVATIONS

Metalfire has a burning desire for innovation. A team of visionary and creative people work around the clock on meaningful and bold innovations. This led to remarkable developments including an aesthetically pared-down ceramic interior finish and unique round (Round) and triangular (Triangle) cast iron shapes. In addition to the standard colors three brand new finish colors were also added to the range added: Maple Gold, Terracotta and Arctic Silver.

On top of these stunning aesthetic developments, as an extension in the Ultime D range, added a BBQ version, Tunnel and Brick. The latter allows brickwork to be provided inside an closed wood fire.

A new range completes Metalfire's closed wood fire range, namely the Optimum: a closed wood fire fitted with a revolving door with high efficiency (+82%) and low particulate and CO emissions. A notable addition is the Urban BEV concept. This extension of the Urban range includes customized fireplace concepts with integrated BEV burners as an alternative to traditional gas burners, developed in collaboration with Planika, a world leader in bioethanol fireplaces. Planika BEV burners combine modern design and eco-friendly technology, with no flue gas outlet. The patented BEV technology ensures safe bioethanol combustion.

INTELLIGENT TECHNIQUES Fusing the art of minimalism with state-of-the-art technology. At Metalfire, they know how should it be done. With metal in the lead role, they design and produce high-end gas and wood fires that comply with the latest building regulations. Heat spreads slowly in the room and fills your home with a casual charm.

Avenue and Urban represent designer gas fires. The closed gas fires are manufactured under the Avenue name, closed gas fires are designed where comfort and ease of use are paramount. In addition, Urban stands for tailor-made fireplaces with minimalist design and intelligent security. With their breathtaking flames, both are a real eye-catcher in any home. Moreover, the finishing possibilities are endless. Both the color, the covering of the gas burner and the lining on the inside can be tailored to complement your interior.

For all those who succumb to the gentle crackle of wood, there are the Optimum, Ultime D and Universal versions.

The closed Optimum and Ultime D models feature dynamic combustion technology which ensures optimal combustion and high efficiency. And that is completely room air-independent. Universal is a safe alternative to the masonry fireplaces thanks to the sliding spark screen in fine metal mesh, the fire grate, the removable ash pan and the lockable flue gas and air damper.

TECH METALFIRE

BEYOND DOUBT BEAUTIFUL A fireplace from Metalfire is so much more than a source of heat. It is a central place in the home where conversations spontaneously arise and time stands still for a moment. The crackling of the fireplace and the dancing flames evoke an authentic charm that catapults you back to a winter evening with family and friends. Raise a glass to life.

Welcome to Metalfire.
